RESEARCH

WHAT IS GENERATIVE AI?

Generative AI is a deep-learning model that can generate the following:

T

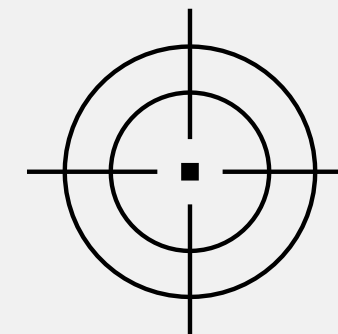

TEXT

GAI generates text based on the prompt that is given to it.

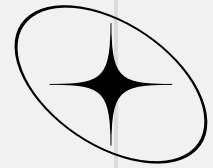

IMAGES

GAI generate images based on detail description given by the user.

ETC

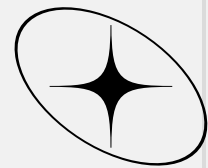

It can generate even audio, video etc all based on prompt given by the user.

HOW DOES GENERATIVE AI WORK?

- Generative AI starts off with a prompt given by the user. The prompt can be anything text, an image, audio, a video etc.
- The AI generates content depending on the prompt given by the user. The main steps are; Data collection, Modal training, Generation and Refinement.
- Most AI have a database based on which they give their responses. Once the database is made the AI is trained using that database. After training the AI, will generate the new content as per the given prompt by the user. Then comes the final step that is refinement depending on the requirement of it.

HOW DID GENERATIVE AI EVOLVE?

- It started in 1932 when George Artsrouni invested in a device called the “Mechanical Brain”, he used it to translate between languages on a computer onto punch cards.
- 1957 was the year when Linguist Noam published Syntactic Structures which helps in describing grammatical rules for generation natural language sentences.
- Later in 1966, MIT professor Joseph created the first chatbot called Eliza, which was used to simulate conversations with a psychotherapist.
- SHRDLU was the first multimodal AI made by Terry Winogra in 1968.
- In 1980, Michael Toy and Glenn Wichmen developed the Unix-based game called Rogue, which used procedural content generation to dynamically generate new levels in the game.
- After years of research and making of things like CNN that can be used to recognize images etc. In 2021, OpenAI introduced Dall-E which could generate images from text prompts.
- After all that was the birth of ChatGPT in November of 2022. Microsoft later integrated AI into its search engine.
- This also led to a lot of copyright infringements as now we can also generate music and get artists from around the world to sing in languages that they don't know.

PROS AND CONS OF GAI

There are many pros and cons to generative AI.

PROS

- Reduces mail response time.
- Automating the manual process of writing content.
- Summarizes complex data into a simpler format.
- Helps generate images.
- Also helps in writing lyrics.
- Helps in improving product demo videos.
- Creating photorealistic art.
- Improve dubbing in movies and educational content in different languages.
- Helps in writing code.
- Helps in creating realistic representations of people.

CONS

- Creates new kinds of copyright issues.
- Can be used to make deep-fakes meaning fake images that will look convincingly real.
- Sometimes the outputs are incorrect.
- Does not give the source so can be hard to trust.
- Could impersonate people for more effective social cyber-attacks.
- Makes it easier to generate fake news.
- Challenges the traditional role of human creators.
- Reduces the uniqueness of human expression.
- Can be challenging to access the original source of the info provided by AI.
- Makes it easier to claim images are AI-generated even when they are not.

TARGET AUDIENCE & THEIR NEEDS

Who are the target audience and what is their needs?

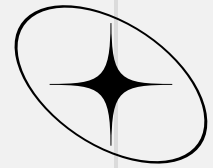

STUDENTS

- They want to know how to use AI correctly without making mistakes.
- What all AI tools are out there?

FACULTY

- What all are the AI tools out there?
- How to use them correctly?
- How people use them incorrectly?

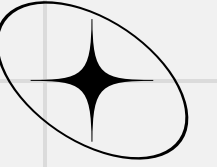

UNDER WHICH LIGHT AM I SHOWING GAI?

- I am planning to show Generative AI in a neutral light.
- Many people know the pros but don't know that there are also cons to AI and vice versa.
- I also feel that my stand on the Generative AI topic is neutral.
- I feel that people should know both sides of AI that is the pros as well as the cons.

VISION STATEMENT

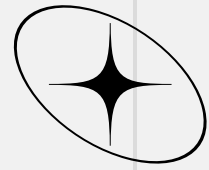

VISION STATEMENT

To develop an app to educate students and faculty regarding pros and cons of Generative AI.

EXAMPLES OF AI IN EDUCATION

HubSpot

AI-Generated Content

Pros

- ✓ Quicker Turnaround
- ✓ Cost Effective
- ✓ Better SEO (keyword clusters, etc.)
- ✓ Avoid Writer's Block

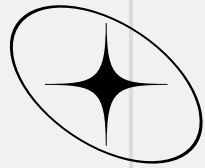

Cons

- ✓ Plagiarism Concerns
- ✓ Google May Devalue AI-Content
- ✓ Inconsistent Content Quality
- ✓ Requires Human Vetting

Digital Transformation Management | Excellence

Pros and Cons of Artificial Intelligence

IMAGES

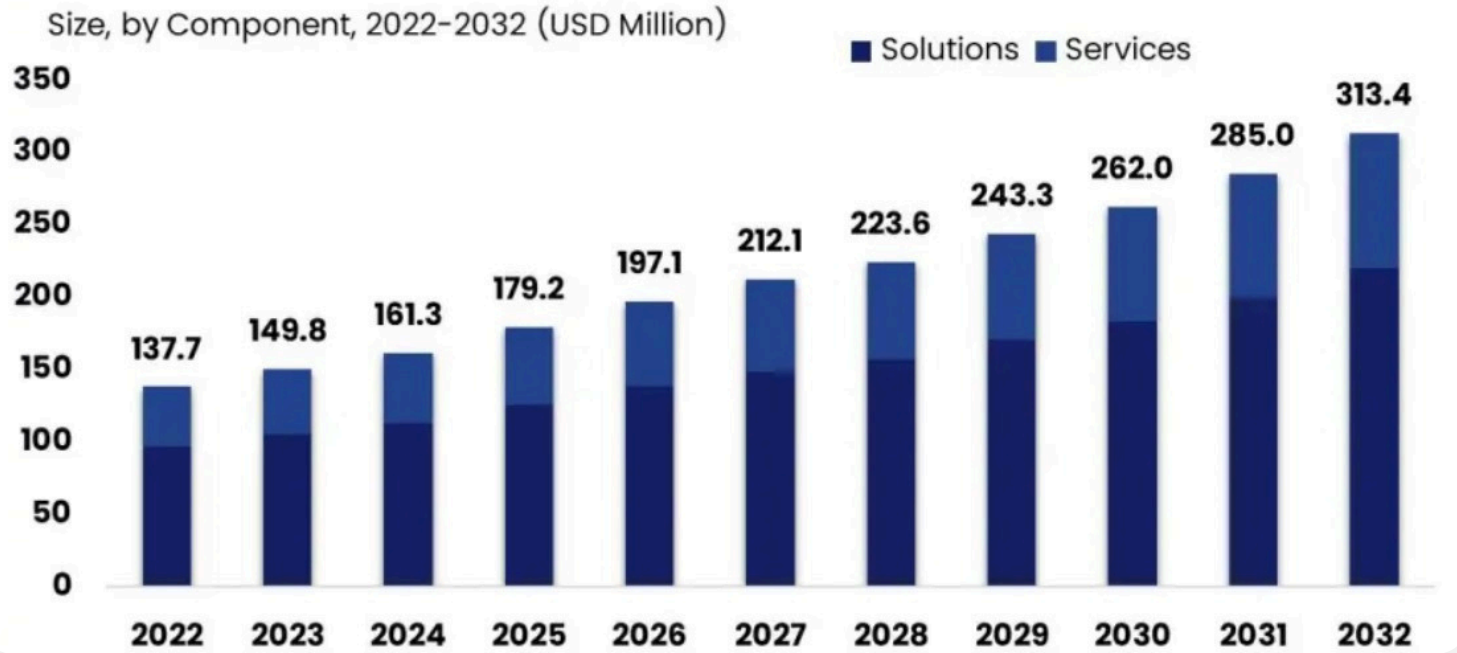

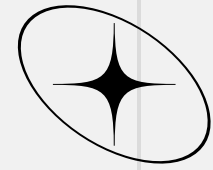

The 9 Benefits of Generative AI:

- ✓ Creativity Amplification
- ✓ Time and Cost Savings
- ✓ Hyper-Personalization
- ✓ Enhanced Efficiency and Productivity
- ✓ Data Synthesis
- ✓ Realistic Simulations
- ✓ Adaptive Learning
- ✓ Enhanced Knowledge Organization and Discovery
- ✓ Improve Customer Experience

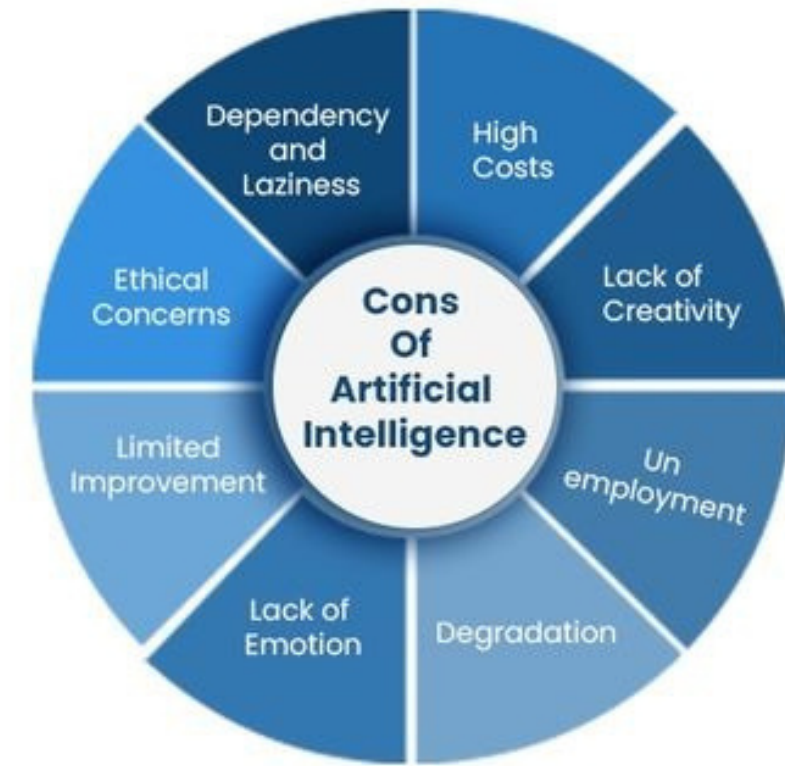

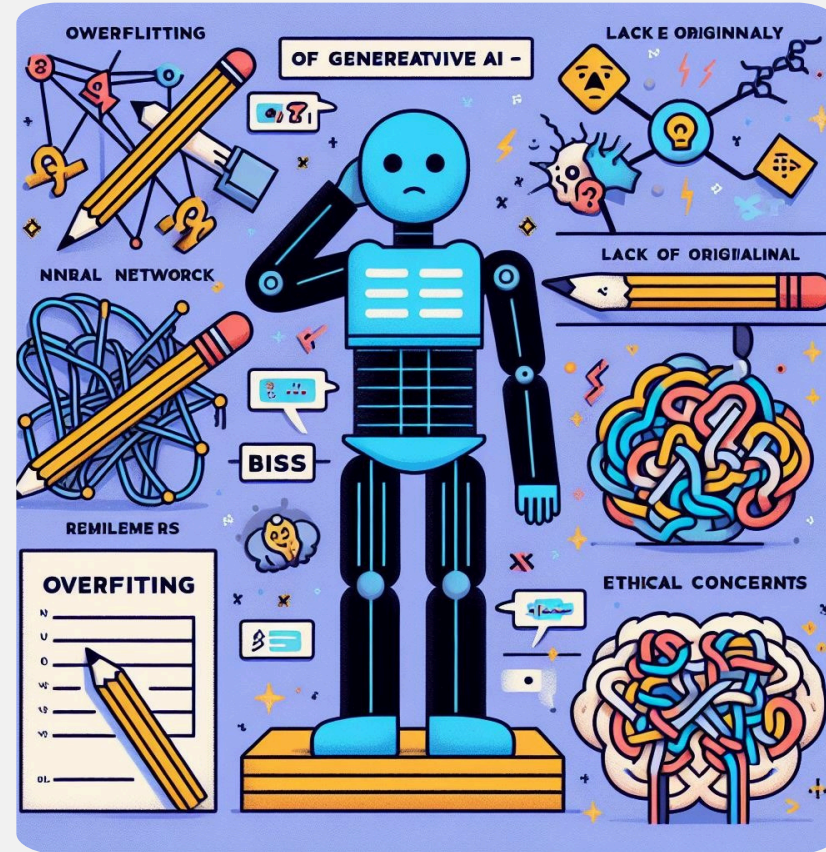

Global Generative AI in Higher Education Market

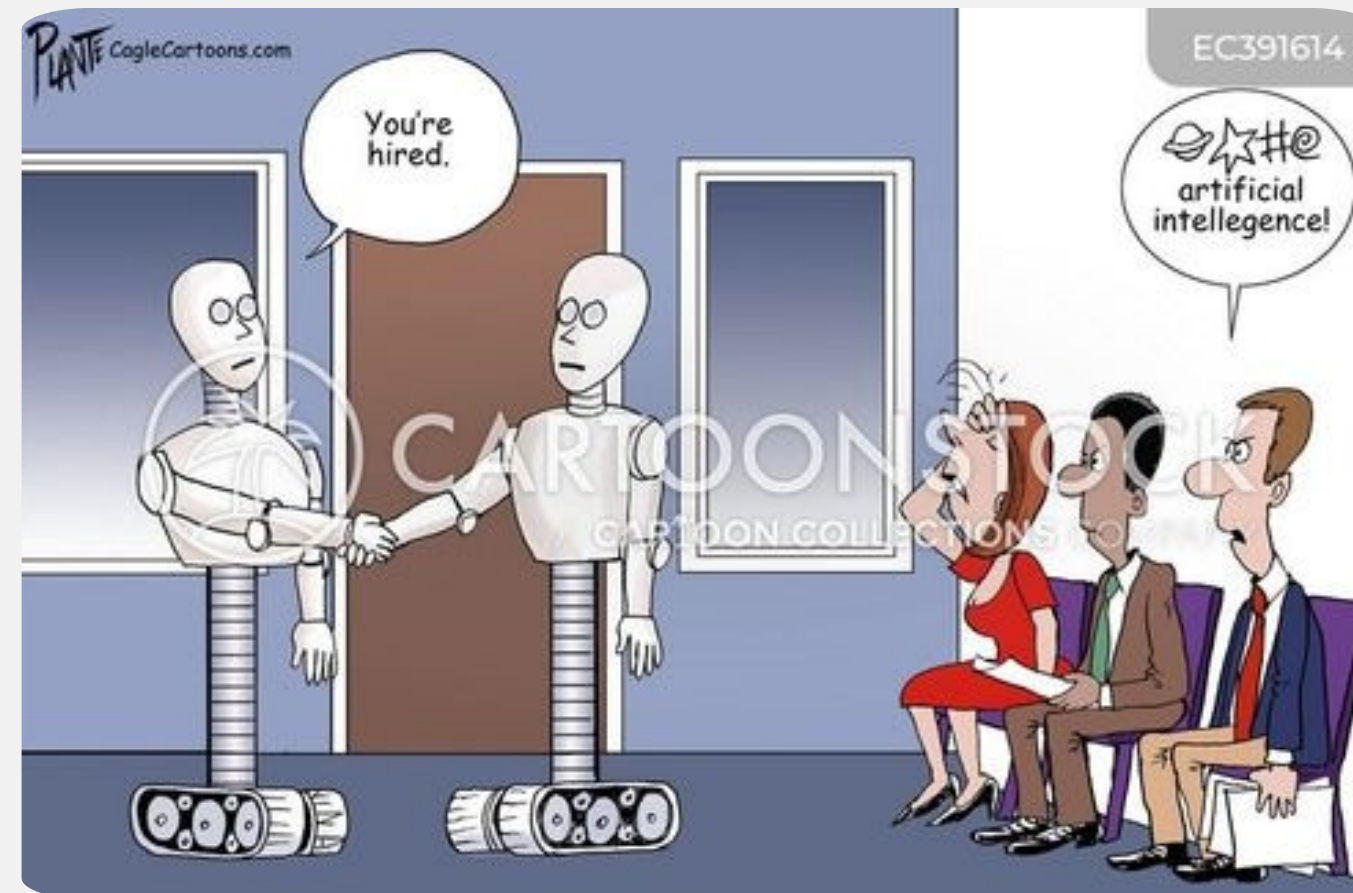

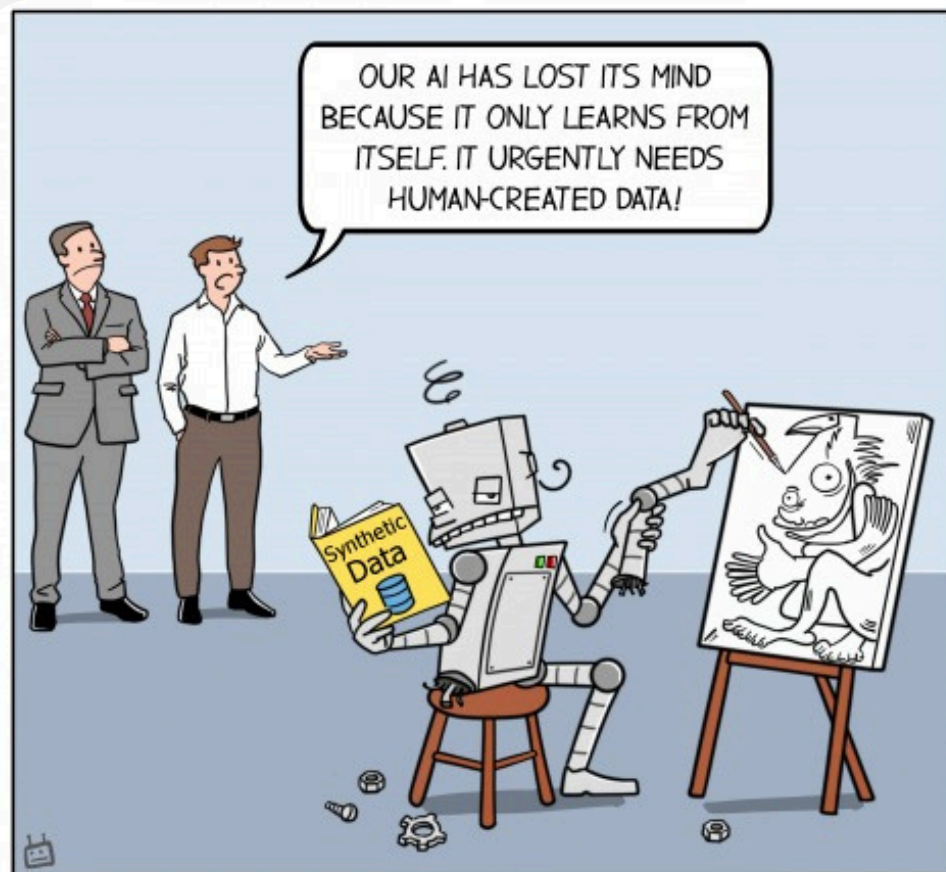

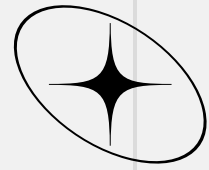

IMAGES

Disadvantages of Artificial Intelligence

- High production cost
- Risk of Unemployment
- Increasing human's laziness
- Emotionless
- Lack of creativity

AI Generated Image

Disadvantages of AI

High Cost

Lack of Personal
Connections

No Replicating
Humans

Addiction

Lesser Jobs

Benefits Of Ai In Marketing

Personalized
customer
experience

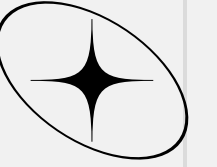

Improved
performance
metrics

Higher
revenue

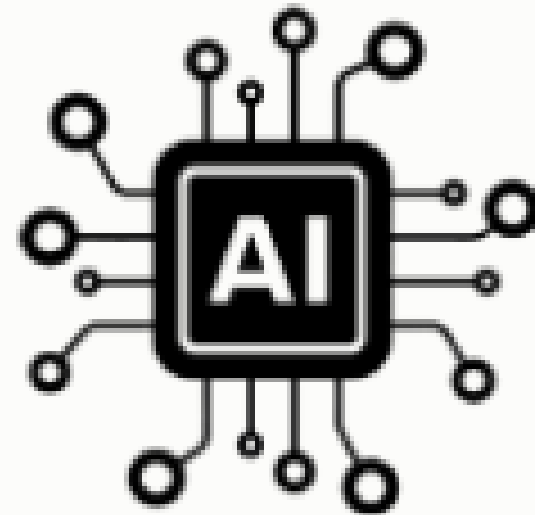

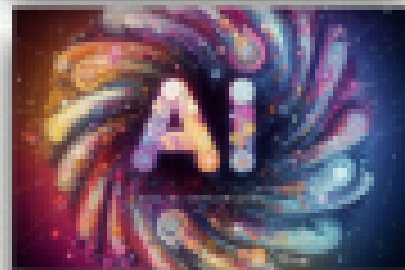

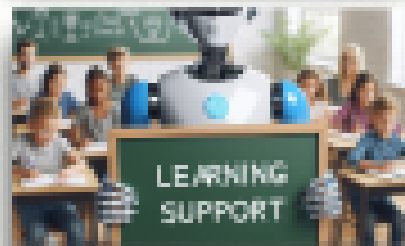

Better
content
& offers

Increased
productivity

SOFTWARES

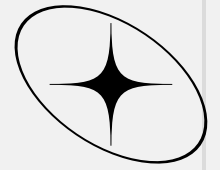

WHAT SOFTWARES I AM USING?

- The softwares that I am using are Figma and Bravo Studio to make an app.
- The reason is I have work with both softwares before.
- Given the time, I feel that it is best to work with these two softwares.

APP

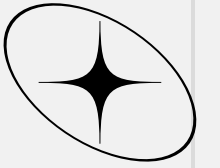

LOGO SCREEN

Gen Flow Insights

- This is the logo screen.
- It is the first screen that will be visible to the user upon opening the app.
- The app name will come below the logo of the app.
- The name of the app is Gen Flow Insights.

QUESTION SCREEN

Welcome to Gen Flow Insight!

Have you used any type of
AI before?

Yes

No

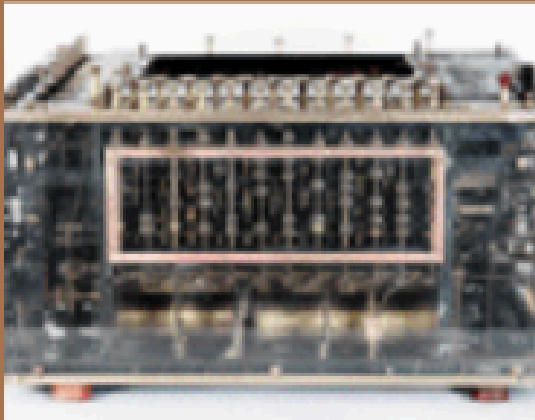

- This is the second screen.
- It follows the logo screen after a short delay.
- Since the app is an informative app, I thought that it best to start with the question “Have you used AI?”.
- As most of the users, are students and faculty most of them might have used AI.
- There may be people who are hesitant about using AI without knowing more about it.
- The question will have two options answer “Yes” and “No.”

< History Of Generative AI >

HISTORY SCREEN 2

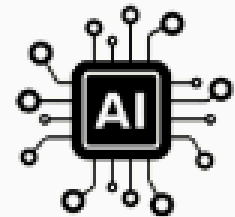

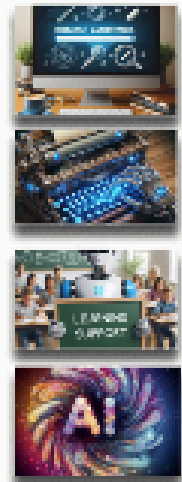

- This is how the information shows up when any year is clicked on the timeline.

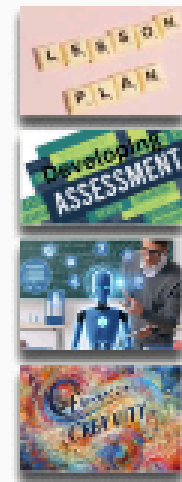

USES OF AI SCREEN

Click on the images to know more

STUDENTS

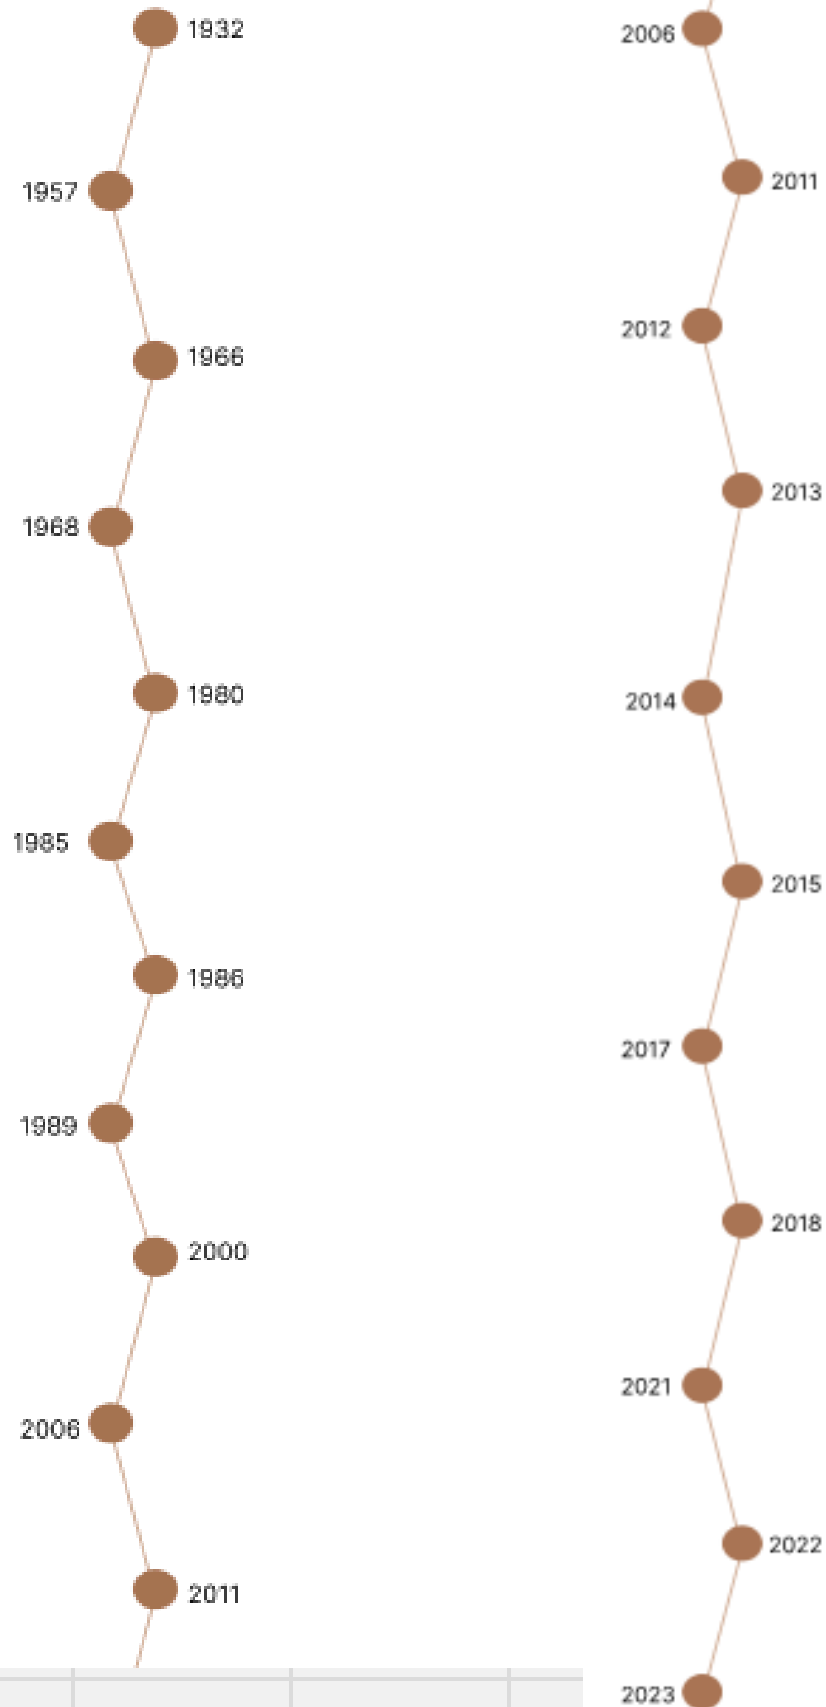

FACULTY

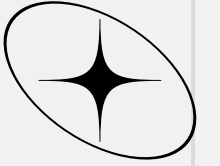

- After the history screen, comes the uses of AI screen.
- As first time users, not everyone knows what exactly an AI can be used for. So this will have the list of what all an AI can do.
- As many think that AI can only help with essays and writing. But AI can also generate images, videos etc.

< History Of Generative AI >

Click on the timeline to know the history

HISTORY SCREEN

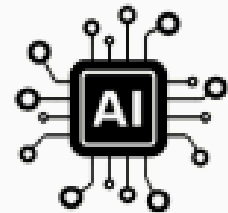

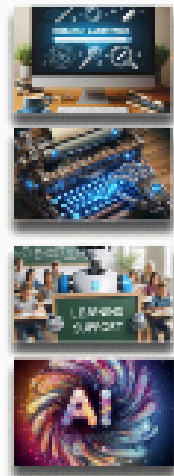

- This is the screen that will show up to users who press “No” in the Question Screen.
- It gives the users a brief of the history of AI.
- It contains a timeline with hidden info.

< Uses Of Generative AI >

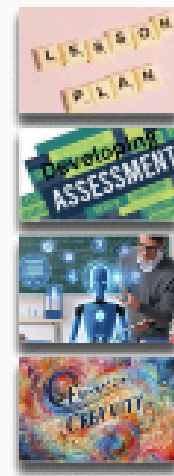

Gather information and generate summaries on various topics.

USES OF AI SCREEN 2

- After the history screen, comes the uses of AI screen.
- On clicking on the images the information pop-up in this way
- As first time users, not everyone knows what exactly an AI can be used for. So this will have the list of what all an AI can do.
- As many think that AI can only help with essays and writing. But AI can also generate images, videos etc.

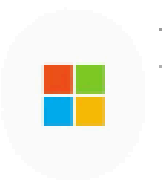

< Different Types Of AI >

OpenAI

OpenAI, known for models like ChatGPT, former GPT models, and DALL-E, has received substantial funding from prominent donors.

Link: <https://openai.com/>

Microsoft

Microsoft actively explores generative AI applications, especially in natural language understanding and generation.

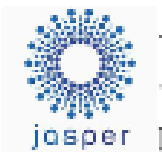

Link: <https://www.bing.com/chat?form=NTPCHB>

Anthropic

Anthropic focuses on customizable content generation using generative AI.

Link: <https://www.anthropic.com/>

Jasper

Jasper is a preferred choice for marketers seeking generative AI solutions.

Link: <https://www.jasper.io/>

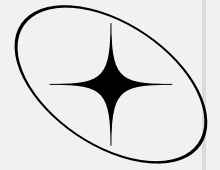

Synthesis AI

Synthesis AI provides generative AI solutions across various use cases.

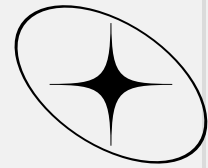

Link: <https://synthesis.ai/>

AI SCREEN

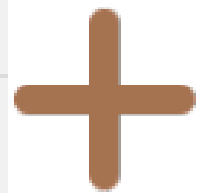

- After the uses of AI screen, comes the AI screen.
- There are many AIs out there. This page will contain a list of all the AIs what each AI can do.

PROS OF AI SCREEN

Deep Fakes

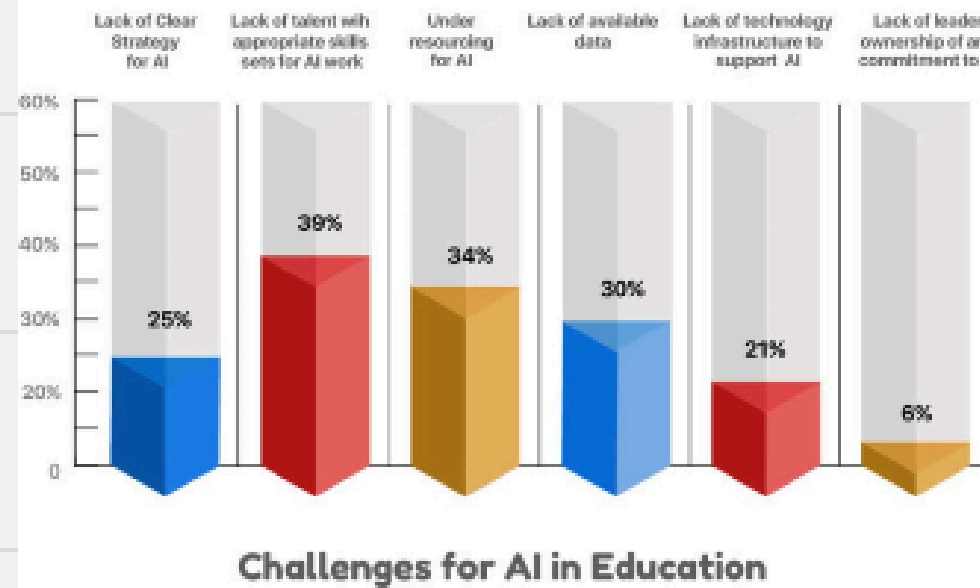

PROS & CONS OF AI SCREEN

- After AI screen, comes the Pros and Cons of AI screen.
- On this page the pros and the cons of generative AI will be displayed. On clicking the pros, the user will be taken to the next page which will showcase the pros in detail and similarly for the cons the next page shown will be of the cons in detail.

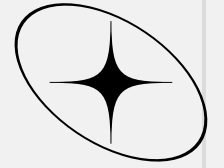

< Pros & Cons of AI >

Click on the plus and minus sign to know more

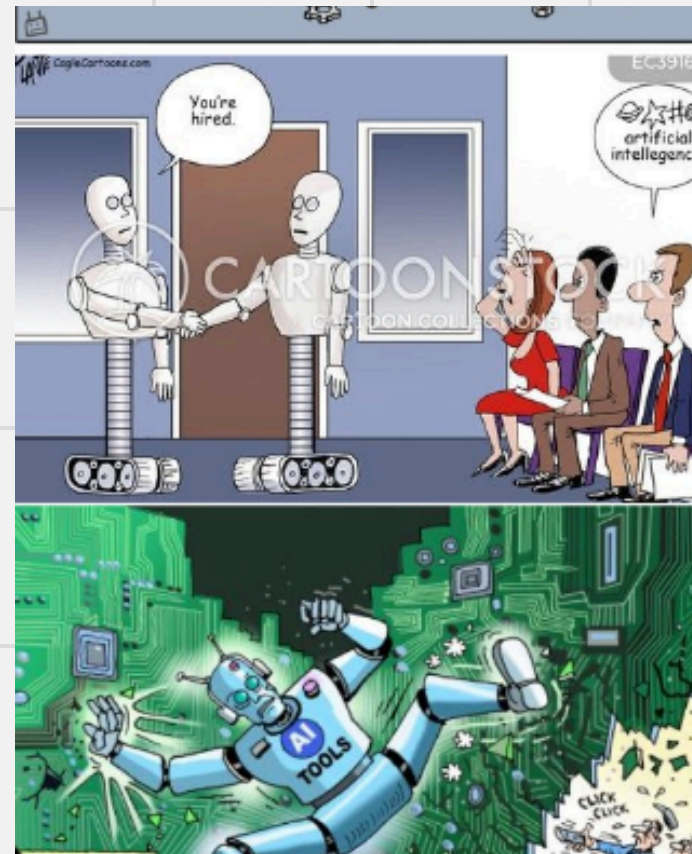

Cons of AI

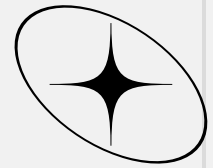

CONS OF AI SCREEN

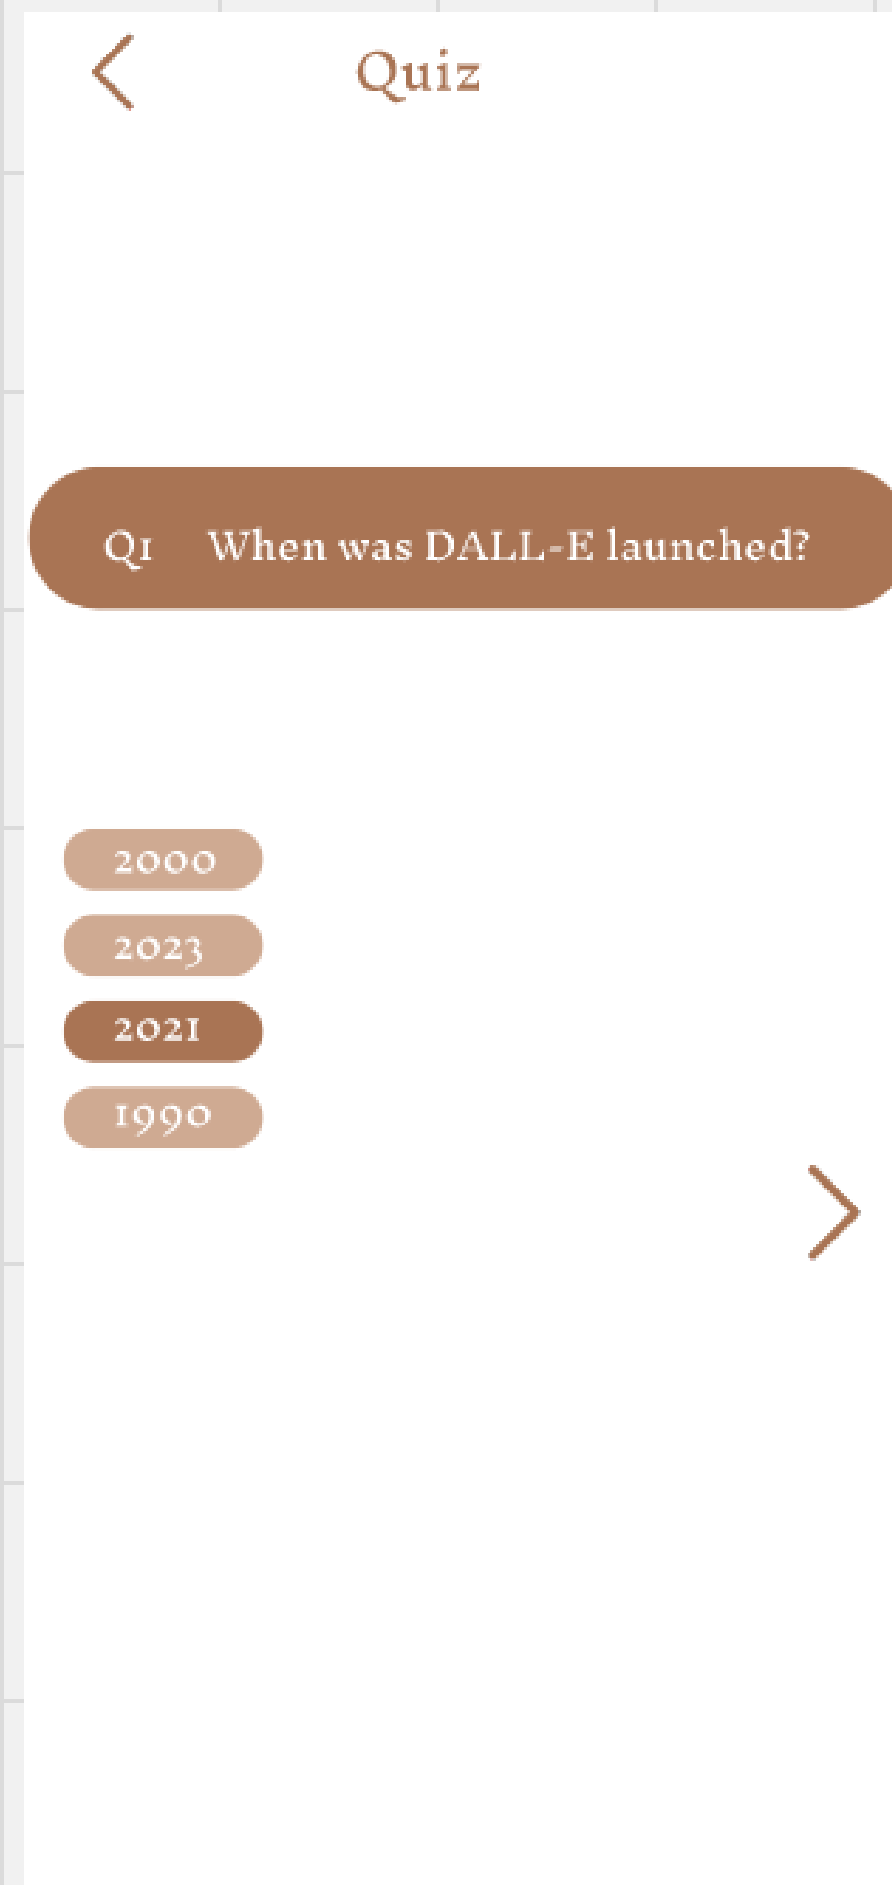

- After the Pros and Cons of AI screen, comes the Cons of AI screen.
- On this page the cons of generative AI will be displayed with a few details abt the cons.

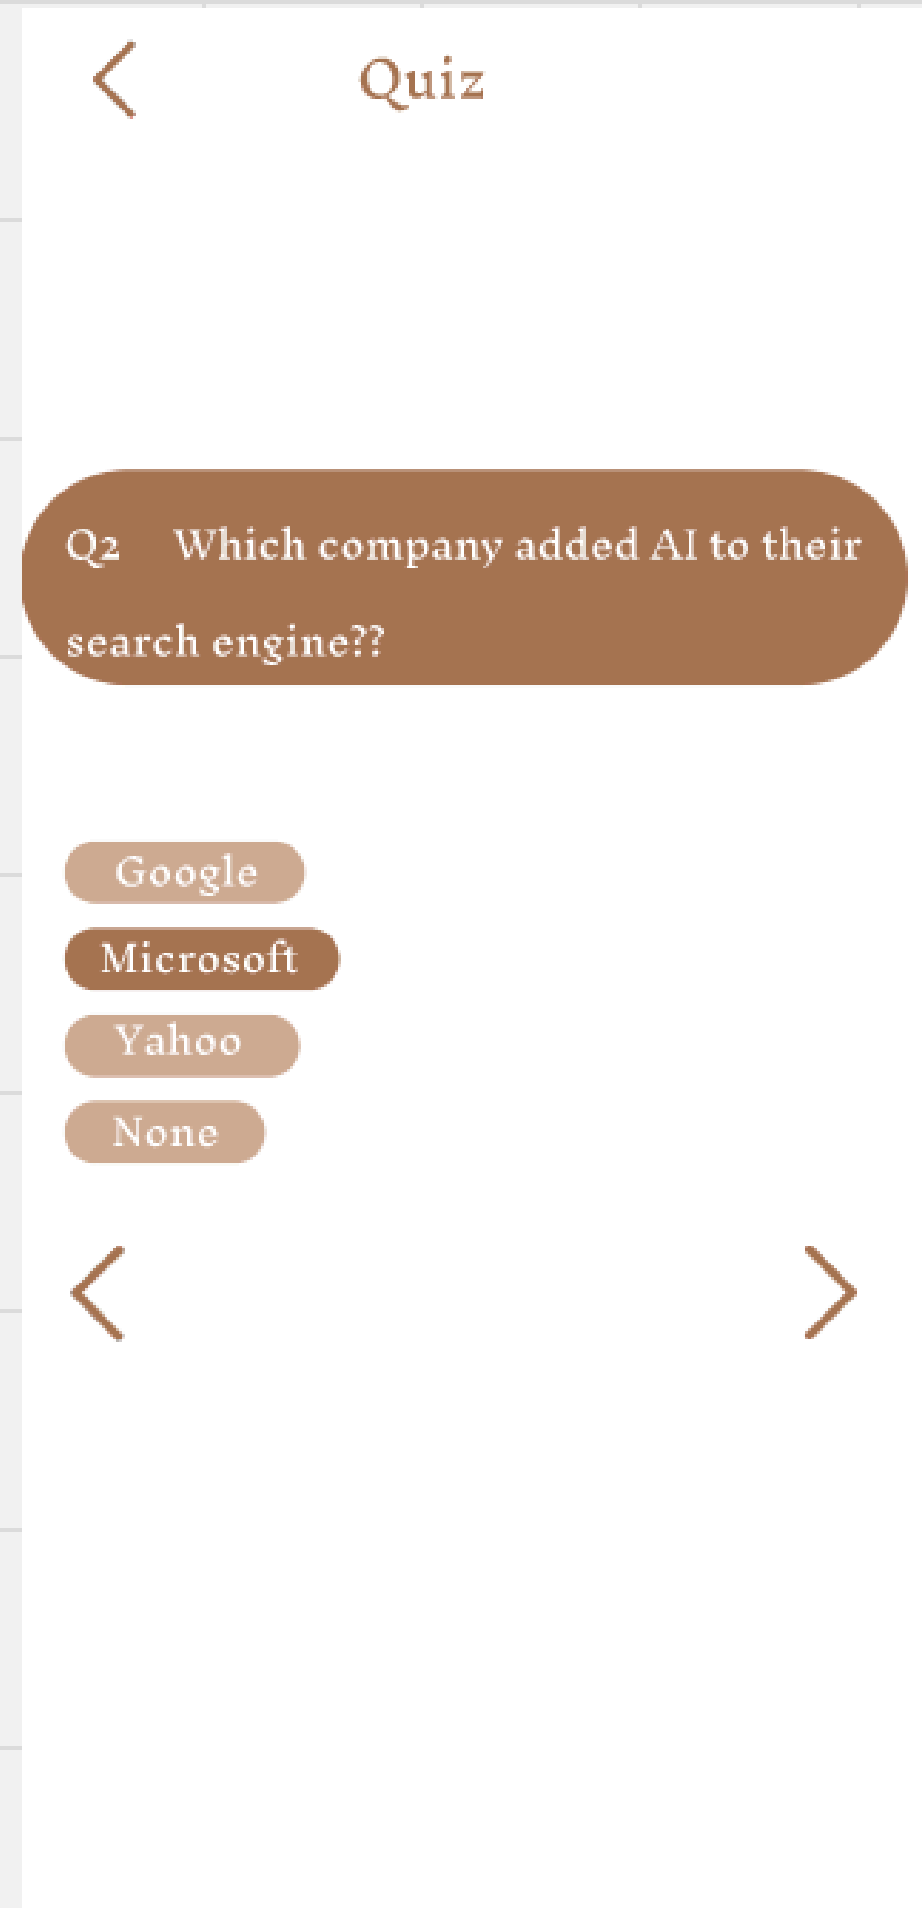

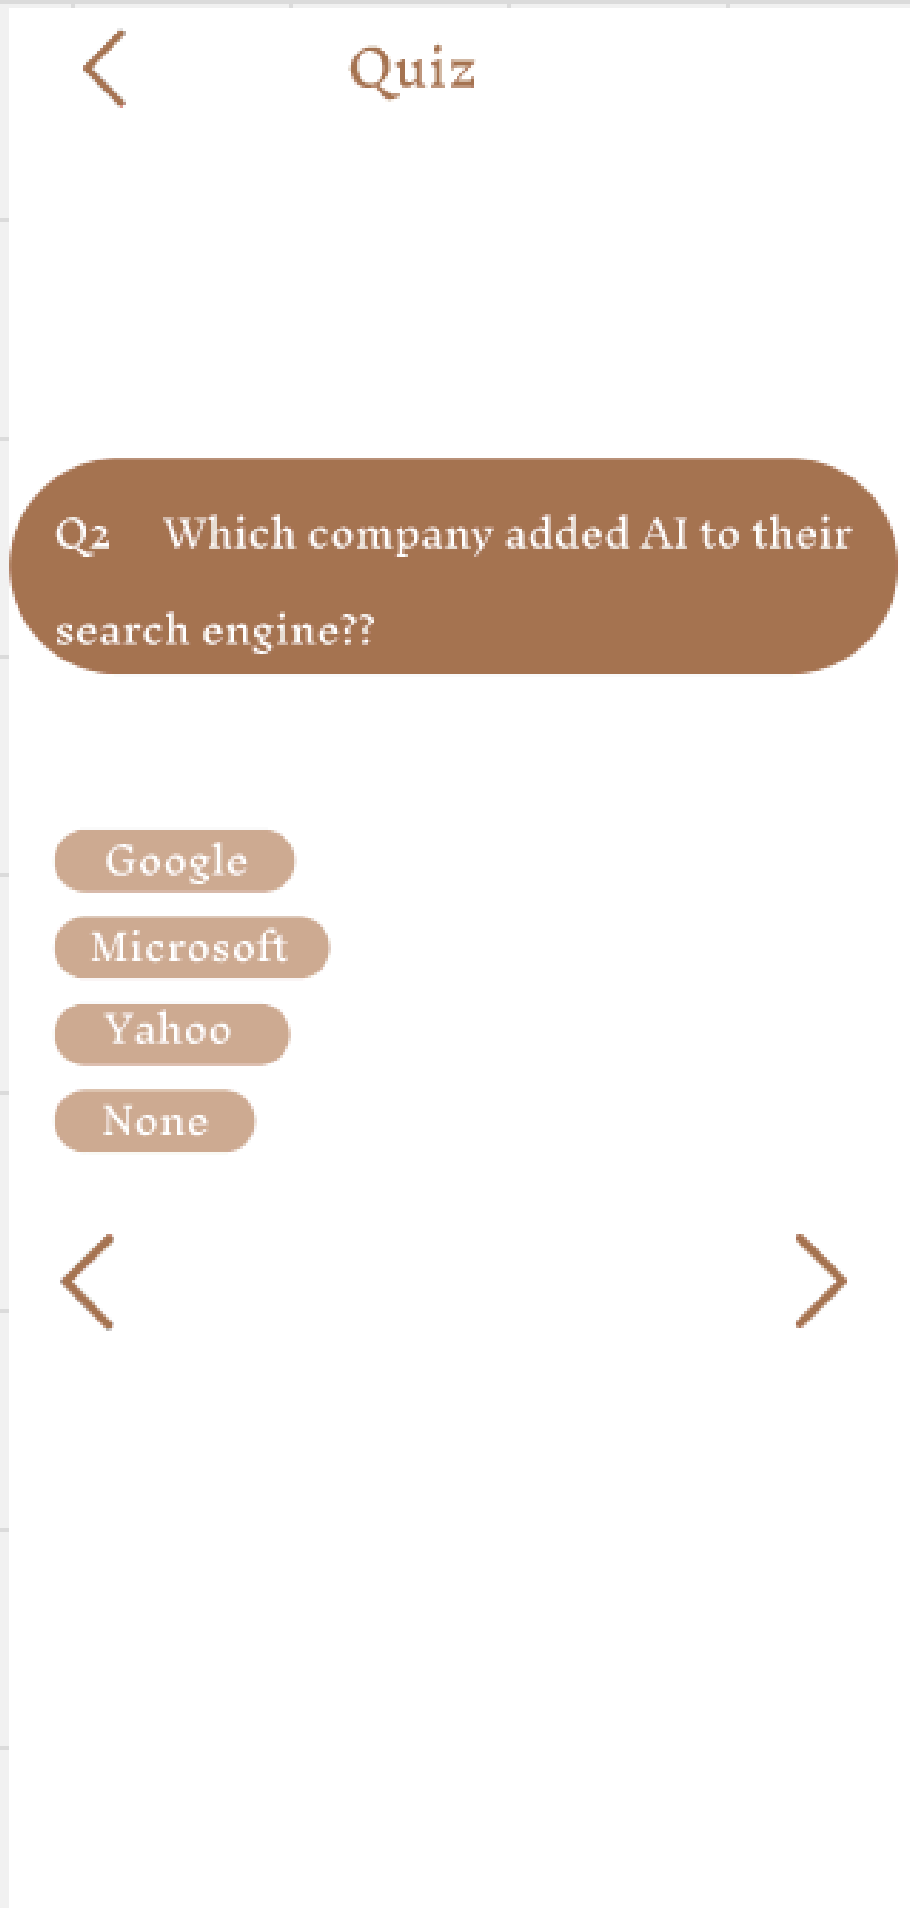

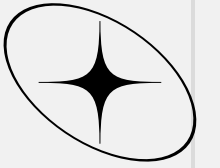

QUIZ SCREEN

- After How to use AI screen, comes the Quiz screen.
- On this page, there will be a question about the generative AI, with multiple choice answers and a button saying next.

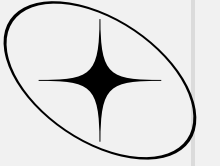

QUIZ SCREEN 1

- On clicking next in the previous screen, this screen will be shown.
- On this page, there will be a question about the generative AI, with multiple choice answers and 2 buttons saying next and previous. On clicking previous the user will be taken to the previous screen and on clicking next the user will be taken to the next screen showing the next question.

HOW TO USE AI SCREEN

Identify Your Needs:

Determine what you want to achieve with AI. Are you looking to automate tasks, gain insights from data, or create something new?

Choose the Right Tool:

Select an AI tool that fits your needs. There are many AI tools available, each with its own strengths. For example, there are AI chatbots for conversation, AI writers for content creation, and AI analytics tools for data interpretation.

Understand the Basics:

Familiarize yourself with the basic concepts of AI and how the chosen tool works. This might involve reading tutorials or watching instructional videos.

Interact with the AI:

- After the Cons of AI screen, comes the How to use AI screen.
- On this page, the user will be shown a how to use an AI tool with some of the most common prompts.

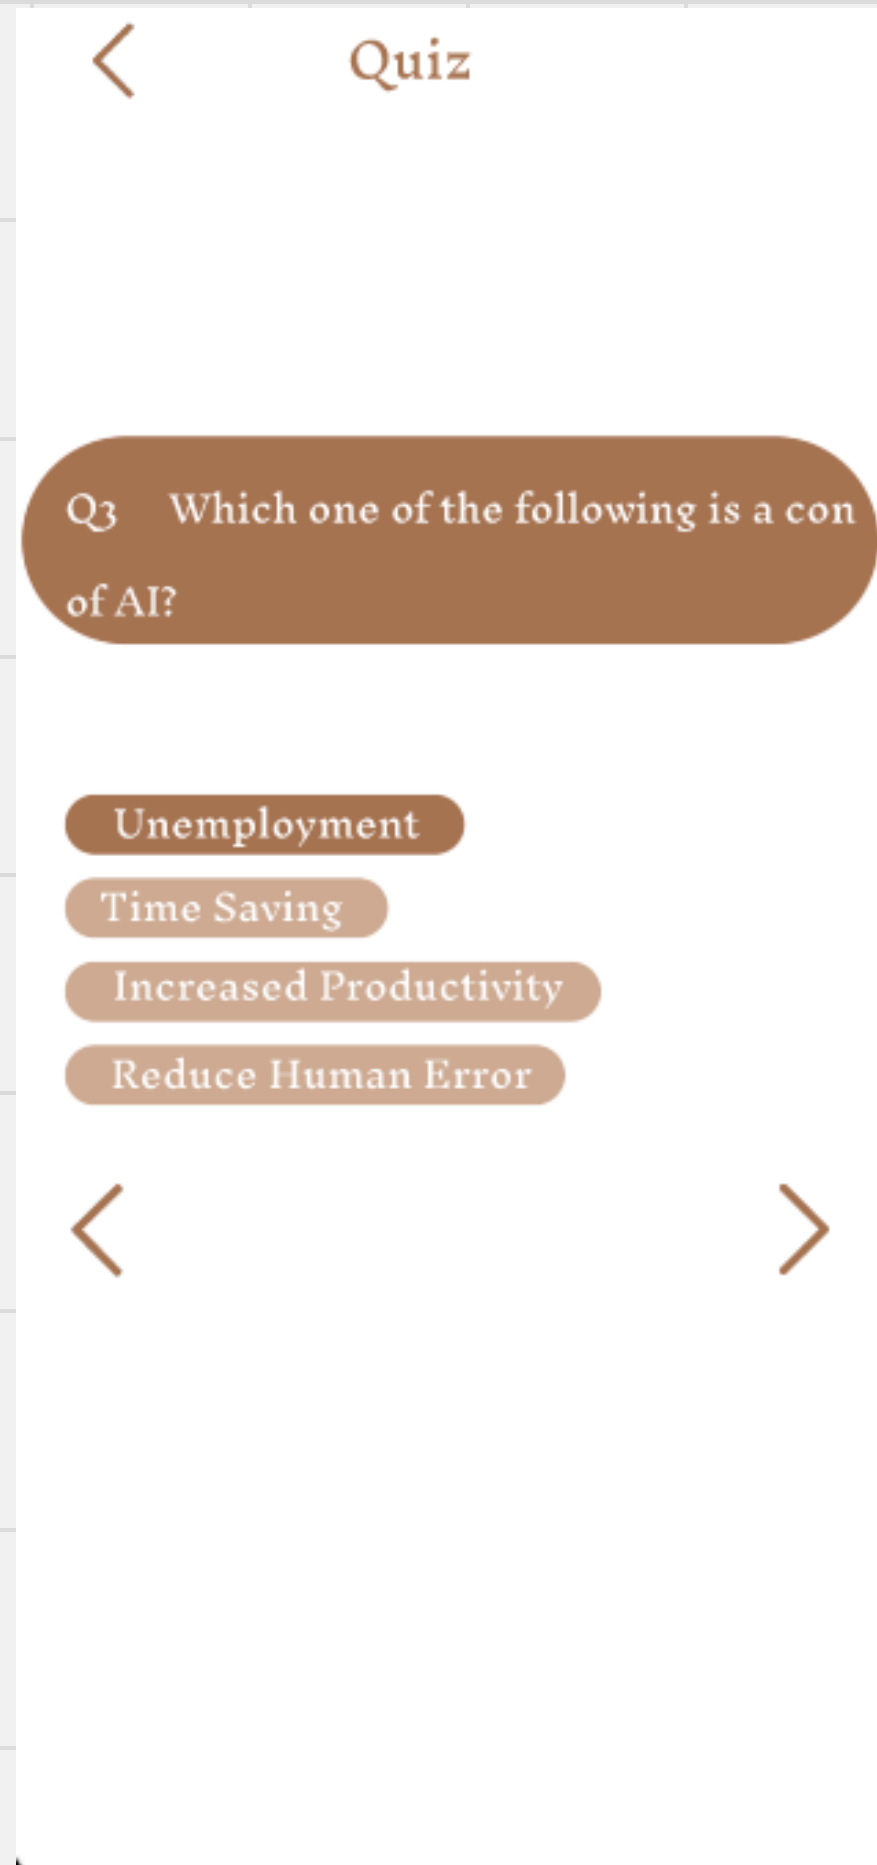

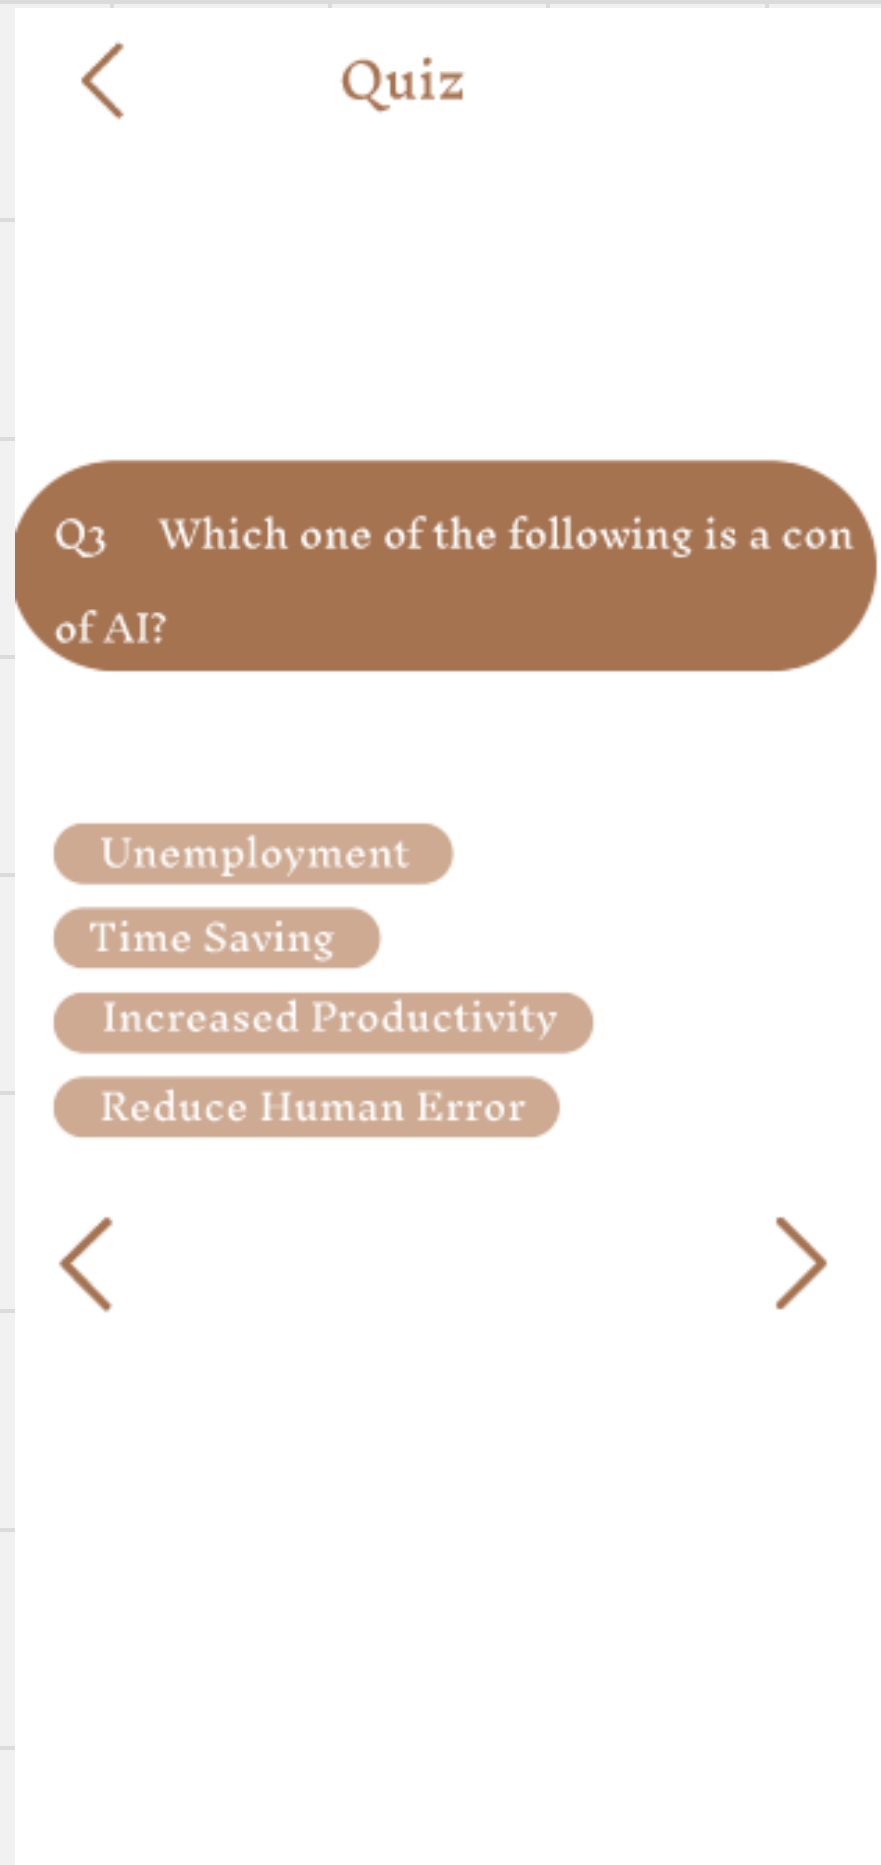

Start using the AI tool. This could be as simple as typing a prompt into a chatbot, uploading data for analysis, or giving commands to an AI assistant.

Refine Your Approach:

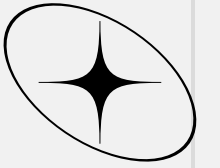

As you use the AI, you'll learn more about its capabilities and limitations. Refine your prompts and interactions to get better results.

Stay Informed:

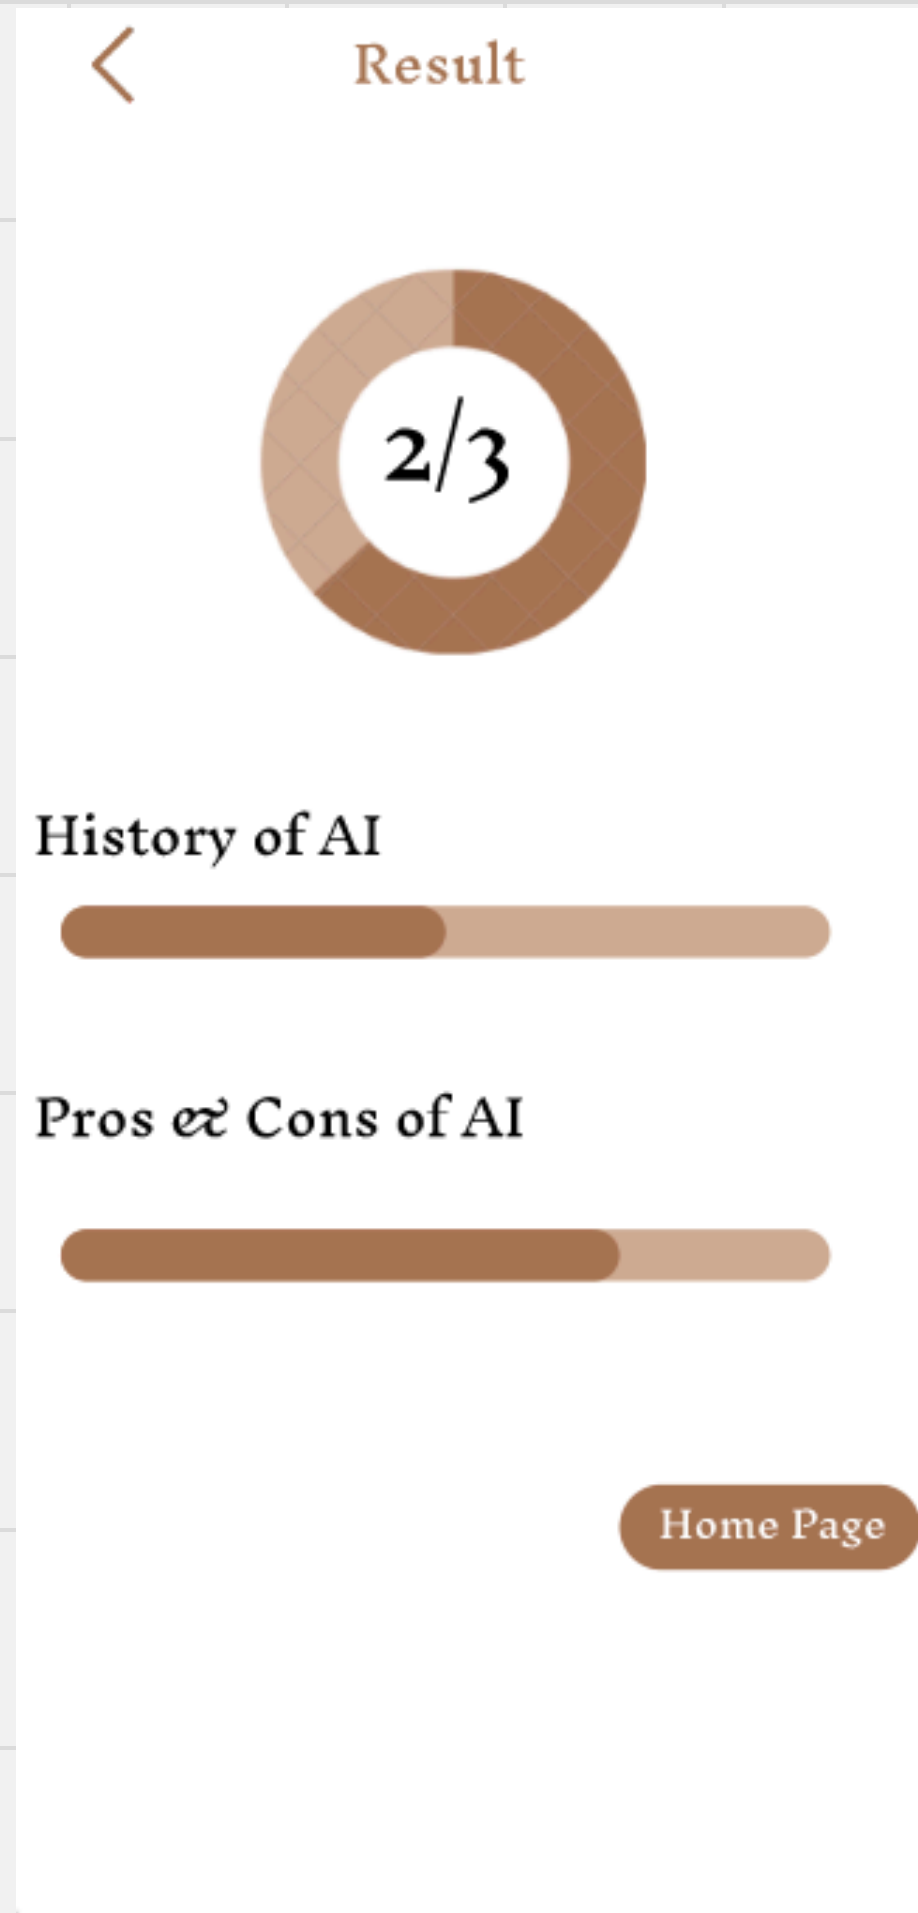

AI is a rapidly evolving field. Keep up with the latest developments to make the most of new features and improvements.

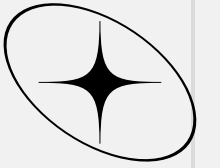

QUIZ SCREEN 2

- On clicking next in the previous screen, this screen will be shown.
- On this page, there will be a question about the generative AI, with multiple choice answers and 2 buttons saying next and done. On clicking previous the user will be taken to the previous screen and on clicking done, the user will be shown the results of the quiz.

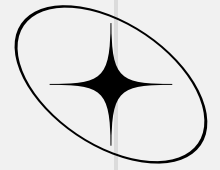

RESULTS SCREEN

- On clicking done in the previous screen, this screen will be shown.
- This page will display the results of the quiz depending on how the user performed in it. There will be 2 buttons namely; re-take quiz and go back to the home page.
- On clicking the “Re-take quiz” the user will be redirected to the first page of the quiz.
- On clicking the “Back to Home page”, the user will be taken to the first page aka the history page.
