

A3 Assignment

Sharanya Chandrashekar

What is this Data?

- This data is about famous books, their publishers, their author, publish month, publish date and the rating given by the readers.

Where did I get this dataset?

- This data is from kaggle Goodreads Book Datasets With User Rating 2M | Kaggle and by Bahram Jannesar and Soroush Ghaderi.

Who posted this dataset on kaggle?

- This data is by Bahram Jannesar and Soroush Ghaderi.

What variables I found interesting?

- The variables that I found interesting are count of reviews, rating and publish month.

Why I chose the above variables?

- The reason I chose the above mentioned variables are because I want to present the fact that the count of rating decrease as the more time passes since the publish month.

What I found was interesting?

- What I found interesting was that there multiple ratings as soon as the book is published. I thought that more the time passes since the book released, people may not rate it. But while making the graphs I found an interesting fact that even if years have passed since the publish month people still rate the book.

One Variable Graphs

```
library(readr)
Books <- read_csv("Books.csv")

## Rows: 58292 Columns: 18
## — Column specification

## Delimiter: ","
## chr (11): Name, RatingDist1, RatingDist4, RatingDistTotal, Publisher, Langua...
## dbl (7): Id, pageNumber, PublishMonth, PublishDay, CountsOfReview, Publish... ##

## Use `spec()` to retrieve the full column specification for this data. ##
Specify the column types or set `show_col_types = FALSE` to quiet this message. View(Books) library(ggplot2)

## Warning: package 'ggplot2' was built under R version 4.2.1 g1
<- ggplot(Books, aes(x = PublishMonth))

g1 + geom_bar(fill="yellow", color="maroon")
```

In this graph, I wanted to show the publish month verses the count. In a bar graph so that the variations are more visible.

```
g1 + geom_density(color="red")
```

In this graph, I wanted to show the publish month verses the count. This is a line graph.

```
g1 + coord_polar() +  
geom_bar(color="magenta")
```

In this graph, I wanted to show the publish month
verses the count.

```
g2 <- ggplot(Books, aes(x = CountsOfReview))  
g2 + geom_boxplot(color="maroon")
```

In this graph, I wanted to show the publish month verses the count. This is a bar graph.

```
g2 + geom_density(color="blue")
```

In this graph, I wanted to show the publish month
verses the count.

Two Variable Graphs

```
g1 + geom_point(color="maroon")
```

In this graph, I wanted to show the publish month verses the count of reviews. To show that the number of reviews are more during publish month than after the book is published.

```
g1 + geom_count(color="green")
```

`g1 + geom_bin2d()`

```
g1 + geom_violin(color="purple", fill="orange")
```

```
g1 + coord_polar() + geom_smooth()
```

```
g2 + geom_polygon(color="yellow", fill="black")
```

In this graph, I wanted to show the rating verses the count of reviews.

```
g2 + geom_jitter(color="blue")
```

```
g2 + coord_polar() + geom_point(color="maroon")
```

Three Variable Graphs

```
g1 <- ggplot(Books, aes(x = PublishMonth, y= Rating,  
size = CountsOfReview))
```

```
g1 + geom_bin_2d()
```

In this graph, I wanted to show the rating verses the publish month, with count of review as size. To show that the number of people who have given review as well as a rating for the books, during the publish month.

```
g1 + geom_tile()
```

```
g1 + geom_jitter()
```

```
g1 + geom_point()
```

```
g1 + coord_polar() + geom_point()
```

Story Of The Data Set

One Variable Graph

```
library(readr)
Books <- read_csv("Books.csv")

## Rows: 58292 Columns: 18
## — Column specification
## Delimiter: ","
## chr (11): Name, RatingDist1, RatingDist4, RatingDistTotal, Publisher, Langua...
## dbl (7): Id, pageNumber, PublishMonth, PublishDay, CountsOfReview, Publish... ##
## Use `spec()` to retrieve the full column specification for this data. ##
Specify the column types or set `show_col_types = FALSE` to quiet this message. View(Books) library(ggplot2)

## Warning: package 'ggplot2' was built under R version 4.2.1 g1
<- ggplot(Books, aes(x = PublishMonth))

g1 + geom_bar(fill="yellow", color="maroon")
```

In this graph, I wanted to show the publish month verses the count. In a bar graph so that the variations are more visible.

```
g3 <- ggplot(Books, aes(x = Rating))
```

```
g3 + geom_freqpoly(color="orange")
```

In this graph, I wanted to show the count of reviews verses the count.

```
g3 + geom_bar(color="magenta")
```

In this graph, I wanted to show the rating verses the count.

Two Variable Graph

```
g1 + geom_violin(color="purple", fill="orange")
```

In this graph, I wanted to show the publish month verses the count of reviews. To show that the number of reviews are more during publish month than after the book is published.

```
g1 + coord_polar() + geom_smooth()
```

In this graph, I wanted to show the publish month verses the count of reviews. To show that the number of reviews are more during publish month than after the book is published.

```
g2 + geom_polygon(color="yellow", fill="black")
```

In this graph, I wanted to show the rating verses the count of reviews. To show that the number of people who have given review as well as a rating for the books.

```
<- ggplot(Books, aes(x = CountsOfReview, y = Rating))  
+ geom_point(color="maroon")
```

In this graph, I wanted to show the rating verses the count of reviews. To show that the number of people who have given review as well as a rating for the books.

```
g1 + geom_point(color="maroon")
```

In this graph, I wanted to show the publish month verses the count of reviews. To show that the number of reviews are more during publish month than after the book is published.

Three Variable Graph

```
g1 + geom_jitter()
```

In this graph, I wanted to show the rating verses the publish month, with count of review as size. To show that the number of people who have given review as well as a rating for the books, during the publish month.

```
g1 + geom_point()
```

In this graph, I wanted to show the rating verses the publish month, with count of review as size. To show that the number of people who have given review as well as a rating for the books, during the publish month.

```
g1 + coord_polar() + geom_point()
```

In this graph, I wanted to show the rating verses the publish month, with count of review as size. To show that the number of people who have given review as well as a rating for the books, during the publish month.

Story Of My Data Set

The Data Set I chose is about Books. It has 18 columns and 58293 rows.

This Data set is about books, their authors, publishers, time taken to publish year of publishing etc
